Communication as a key element in Nursing care

- **Essential competence in human relationships it includes an innate component and is considered a skill that can be learned.**
- **The practice of the nursing profession requires having a high sensitivity to treat and relate to people who are in health-disease processes.**
- **It is based on the ethical and deontological principles that make up this discipline.**

Justification

No consensual list of communication skills has been found with regard to the training of Bachelor's Degree in Nursing students.

There is no unification in terms of evaluation criteria, no in terms of their development methods in the different study plans.

It seems convenient to develop common criteria for a comprehensively understood communication competence, detailing specific learning outcomes.

In this way, goals can be shared regarding educational strategies and the acquisition of these competencies can be evaluated with common criteria in the most objective way possible.

HYPOTHESIS

It is possible to define, through the consensus of academic experts and nursing professionals, a profile of communication skills (formulated in the format of observable learning outcomes) that nursing degree students should acquire during their university studies to develop a graduate profile. That responds to the current needs of society regarding the profession.

- 7 Conclusions

GENERAL OBJECTIVE

Define a common set of communication skills to acquire during university studies for a Degree in Nursing, acceptable in Spain, Portugal and in countries of the Ibero-American sociocultural environment.

SPECIFIC OBJECTIVE (I)**1**

Identify competency areas in the field of healthcare communication most relevant to apply to Nursing Degree teaching in the countries involved.

2

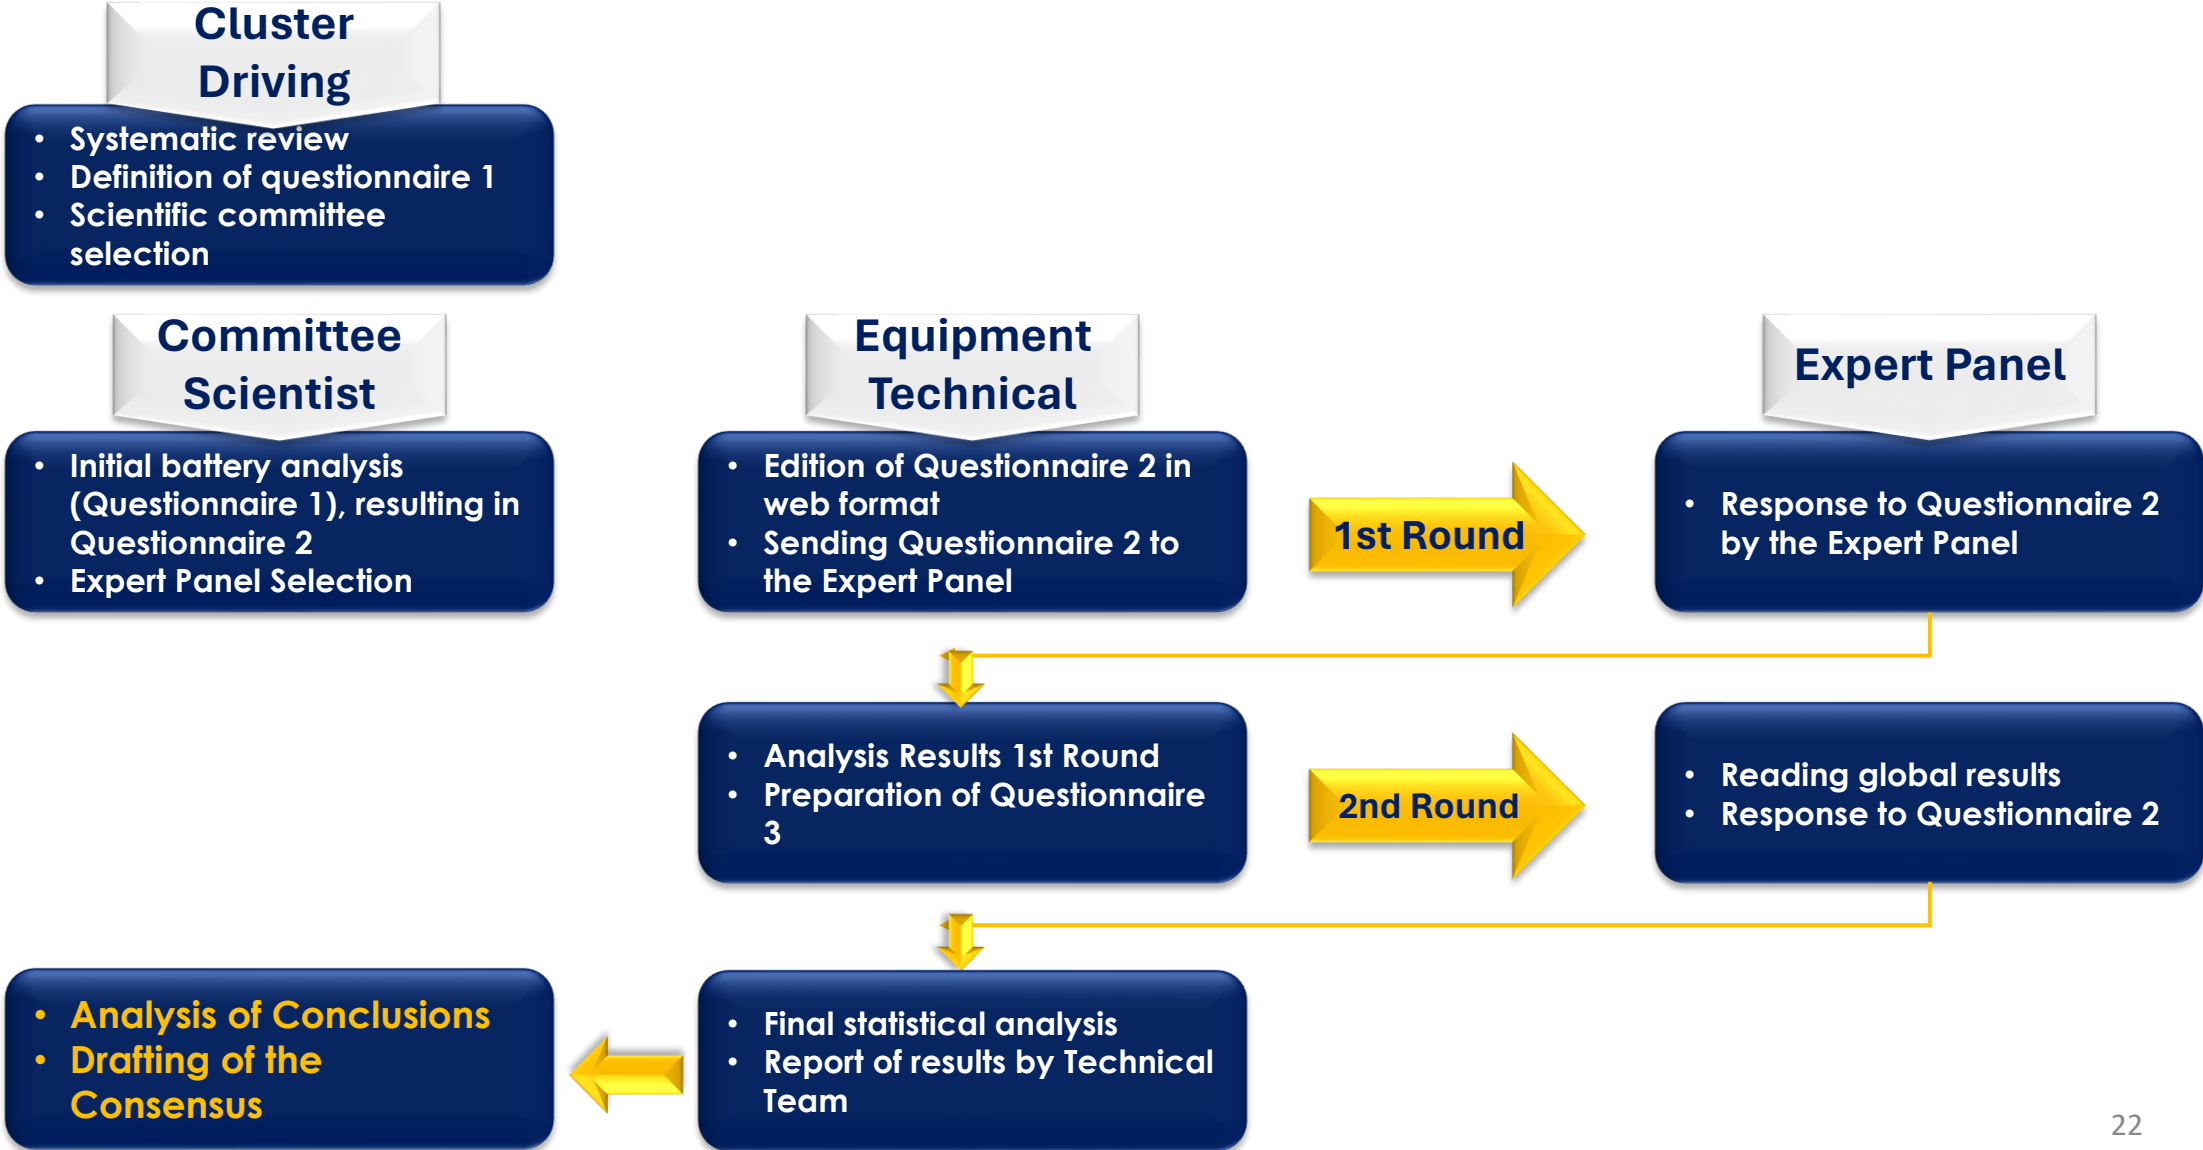

Define, under a consensus of Ibero-American experts, a detailed list of possible learning outcomes in terms of communication competence for university nursing students, in each of the defined competence areas.

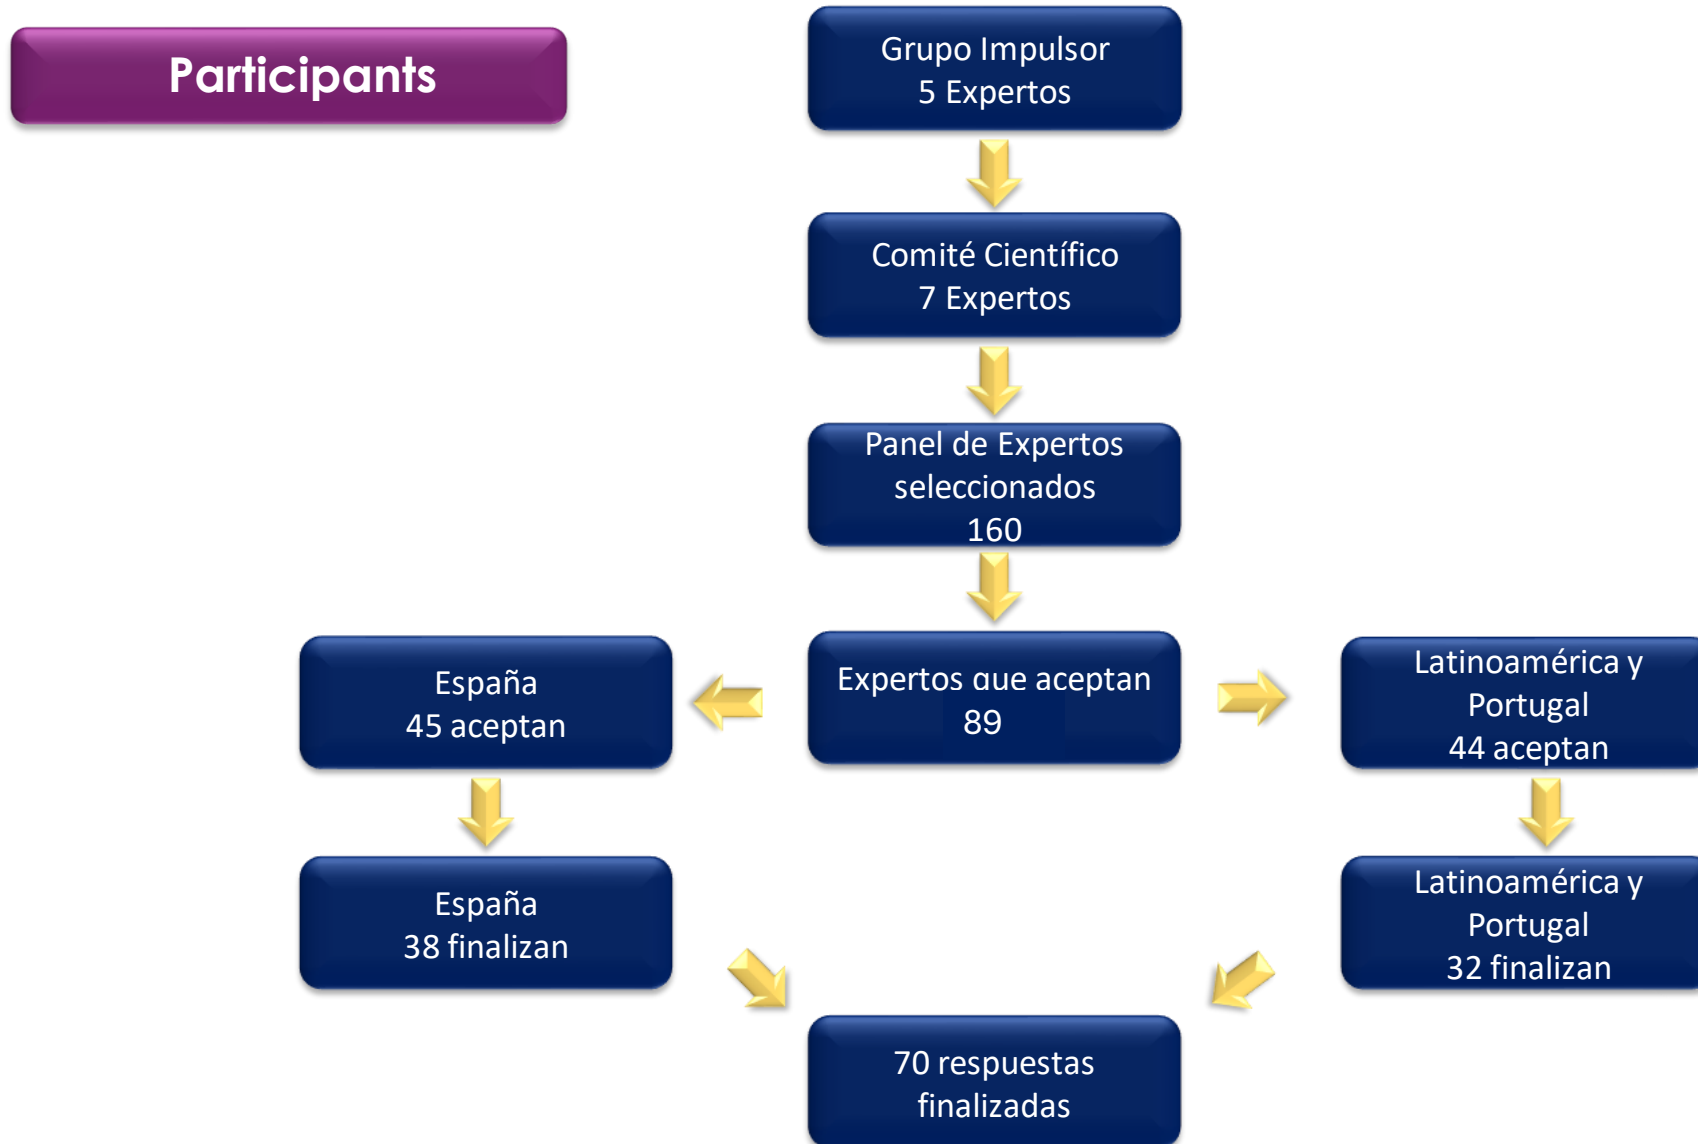

3

Identify, within the agreed upon learning outcomes, a subset of them that can be considered more applicable and suitable to form part of a core curriculum of core and priority communication skills for nursing students.

Consensus items

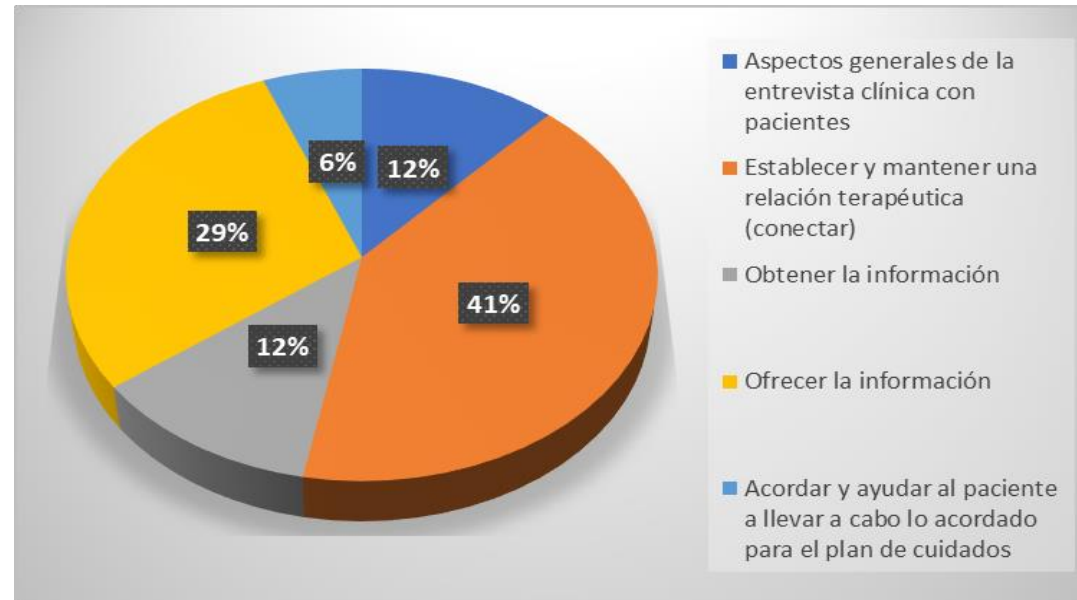

The panel reached sufficient agreement in the first round of the survey, according to the pre-established consensus criteria, regarding the [68 learning objectives](#) proposed for evaluation by the Scientific Committee.

Core Curriculum of priority learning objectives

Included in the proposal are the 17 items with a mean score higher than the value of the 75th percentile of said distribution of means (8.306).

All of them belong to the “Communication with the patient (dyad)”

Conclusions

1.- The final result of the consensus process establishes a list of 68 learning outcomes in clinical communication adapted to Nursing Degree studies in Ibero-American Countries, developed and agreed upon with the active participation of an international expert group widely recognized in their reference areas.

2.- The project concludes with the selection and proposal of a subgroup of 17 learning outcomes that present an especially high degree of agreement in the context studied, which allows them to be considered as a basic and priority core (a core-curriculum) of results. of central learning on which to place emphasis when developing training curricula in clinical communication for Nursing studies.
